The original international prototype of the metre The Meter still kept at the BIPM under the conditions specified in The so-called radio spectrum occupies an informally defined range of wavelengths from roughly a millimeter microwaves to several tens of kilometers myriametric waves.

The metre was in fact defined as one ten-millionth of one-quarter of the earth's circumference. So how did this unit of measurement come to be? It showed great scientific results and was an efficient political tool. In Johann Jacob Baeyer published a report suggesting that European countries should adopt the metre as the unit of length. This meter was used mainly for DC.
