There are also excellent documents on Wikipedia about Wi-Fi and wireless signals. Some of these carriers already control small swaths of high-frequency radio airwaves, but many will have to purchase more from the government.

For instance, a lightbulb might be 40 watts. The available channels vary depending on where you are in the world. Also, if there are only nodes or clients in one direction of the router, then the signals going in the opposite direction are wasted:

The initial cost of these 5G infrastructure improvements may be tremendous. Teachers were doing observational assessment, a common research-based practice of watching students read, recording their errors and strategies, and doing copious paperwork to arrive at results. While it's true that I feel the AirPods 2's new features are modest, they're all still improvements over AirPods 1.
